

Our New Survivair® System of Respirators is Designed to Give You a Better Fit.

Survivair has been protecting firefighters from smoke, fumes and toxic gases, and industrial workers against respiratory hazards in all kinds of environments since 1981. Willson® has been manufacturing respirators for over 80 years. Now, with the addition of Willson reusable respirator products to the Survivair line, we offer the industry's most comprehensive system of air purifying respirators (APR), powered air purifying respirators (PAPR), supplied air respirators (SAR) and self-contained breathing apparatus (SCBA). With fourteen half mask styles and sizes, six full facepiece configurations, and our newly consolidated cartridge line, Survivair respirators now provide one source for more faces and applications.

In this product guide we have compiled the information you need to better understand your respiratory

protection needs and to select the best range of products for your application. Though abbreviated in this brochure, full text on all of these products is available on our web site: www.survivair.com

All Survivair products meet or exceed all relevant industry standards, including NIOSH and NFPA. When you're on the job, you know you can be safe and secure with Survivair.

For additional information, our customer service representatives are always available to answer questions or help you locate a Survivair distributor in your area. Call 800.821.7236.

One Source, One System: Survivair Versatility and Value.

As indicated by the icons to the right, selected lines of Survivair half mask and full facepiece respirators can accept both threaded (S-Series) and bayonet (T-Series) type cartridges.

Our S-Series cartridges are approved on all Survivair reusable facepieces. The traditional threaded design is easy to use and is widely accepted throughout the industry. With the S-Series able to fit our entire reusable respirator line, Survivair can offer a broad selection with one cartridge system.

The T-Series allows an additional option for your Survivair reusable respirator. The positive locking cartridge connector offers an audible lock to assure correct cartridge attachment as well as an open flow lid design and large inhalation ports for improved breathing resistance.

Comfort, protection, versatility and value. They all add up to Survivair.

Threaded Cartridges

This ICON indicates selected Survivair® products that will accept threaded (S-SERIES)* cartridges.

Bayonet Cartridges

This ICON indicates selected Survivair® products that will accept bayonet (T-SERIES)* cartridges.

Willson Products

This ICON indicates former Willson® products that have been carried over and consolidated into the NEW Survivair® product line.

Lightweight and easy to maintain. With its comfortable silicone facepiece, this durable, user-friendly half mask air purifying respirator can withstand years of washing and use. One of the industry's lightest respirators, the 2000 Series features an innovative yoke design, and an angled, self-adjusting nose bridge to accommodate safety or prescription eyewear.

- Durable, lightweight silicone facepiece construction
- Large, pliable sealing area for secure fit for almost any facial type
- Improved yoke and head harness design reduce facepiece slippage
- Sliding adjustment system on head harness keeps loose straps secure
- Easily converts to belt-mounted PAPR without the aid of tools
- Available in three sizes

Recommended Use

Professional users who seek a lightweight respirator that will provide protection in a wide variety of applications.
